Suggestions for LOM and CV

Following are some of the suggestions based on problems I have noticed in many motivation letters and CVs.

1. The sweet spot for the length of the motivation letter is 500 words. At max 700 words. (I have seen motivation letters of below 200 words and above 2000 words).
2. Plan your LOM before you start writing. Spend time on thinking about what you will write and how much. I have noticed people start writing and mention too much about primary education. When they reach to masters, they say it is getting long and write a single sentence. Your master's degree is more important than the primary. Plan, plan, and plan. Then write, review, plan and write again.
3. Do not copy-paste from other motivation letters. Please read them and absorb information from them and then write your own motivation.
4. Write in the flow so the committee can follow your life and motivation. Do not jump topics from paragraph to paragraph, even sentence to sentence.
5. Give credit to yourself only where its due but saying something like I am a born researcher and you have zero publications does not make sense.
6. If you have teaching and research experience, capitalize on that. It's a big plus.
7. If you have studied or worked abroad, mention it. It's important.
8. Do not write a vague statement like this area of research or my favourite area of research mention what is that area of research. Also, don't write 6-7 areas of research. Only write 1 area of research.
9. Make sure it is formatted correctly. I have seen motivation letters with the font size of 9 in italic with some difficult to read font and font size of 17. Format your letter properly. Use justify alignment. Make sure paragraph sizes are somehow uniform. one big paragraph then two sentences paragraph and then again long paragraph does not look nice.
10. Make sure your CV is readable. Important information is readily available, and unnecessary information is like metric and primary education and 7-days internship details are not cluttering your CV.
11. Most importantly check grammar and spelling mistakes. Revise and improve your proposal and LOM if your application is not producing results. Learn from it and improve them.
